

salitha kaweendra

software engineer / blockchain / ai / backend

Software Engineer specialising in blockchain, AI and backend development. Experienced in MERN, AWS infrastructure, smart-contract platforms and delivering scalable technical solutions.

skills

backend / web

JavaScript, TypeScript, Node.js, Express.js, Python, FastAPI, REST, PHP

blockchain

Solidity, Web3.js, Ethers.js, Smart Contracts, Ethereum, EVM, L2, DeFi, Wallet Security

ai

LLMs, RAG, NLP, LangChain, Ollama, OpenAI, Google AI, Amazon Q, MCP, n8n

cloud / data

AWS, CDK, Lambda, Docker, CI/CD, MongoDB, Pinecone, ChromaDB, DynamoDB

education

2019-2020

BSc Computer Science and Software Engineering

University of Bedfordshire
First Class Honours

2016-2019

Higher Diploma in Information Technology

SLIIT, Sri Lanka

experience

Nov 2023-Present

Sydney / Colombo

Senior Software Engineer

XigeniX / Full-Stack Blockchain

Full-stack blockchain and AI development with AWS, CDK, Lambda, Solidity, Ethers.js and Node.js.

- Developed multi-model AI, natural-language ordering and RAG systems with OpenAI, Ollama, Pinecone and ChromaDB.
- Architected a multi-tenant Amazon Q Business assistant with AWS CDK, tool integrations, prompt fine-tuning and evaluation workflows.
- Implemented MCP access to internal services and improved tool execution and context handling.
- Delivered MyCarbon on Arbitrum with custom smart contracts and Lokblok Toughbox wallet security.
- Led company-wide SonarQube adoption for automated code-quality and security analysis.

Jun 2021-Nov 2023

Seoul / Remote

Software Engineer

Block-Stars Pvt Ltd

Built MERN and Web3 products using Web3.js and Solidity; also contributed as Project Lead and supported QA.

- Delivered NFT marketplaces using ERC-721 and ERC-1155 contracts with OpenSea-compatible minting.
- Created an ERC-20 token generator and re-engineered MetaMask as a Polygon-based custom wallet.
- Built middleware connecting a KOSPI/KOSDAQ platform to Ebest and automated daily KRX market-data collection.
- Developed and deployed GREEN P2P, a containerised Tatum.io custodial wallet with gas-free transactions.

Jan 2020-Apr 2022

Independent / Remote

Freelance Software Engineer

iSotek / Upwork

Delivered web, mobile, Web3 and machine-learning solutions using MERN, PHP, Python, Go and Java.

- Built DIG-NFT on the XRP Ledger and the Node.js / MongoDB backend for MathBuddy.
- Created a Scikit-learn clothing predictor exposed through FastAPI and an educational Java / MySQL math game.
