

SALITHA WIJERATHNA

SOFTWARE ENGINEER / BLOCKCHAIN / AI / BACKEND

+94 71 188 3899 | salitha.wijerathna@gmail.com | kaweeendra.is-a.dev |
linkedin.com/in/kaweendra | github.com/kaweendras

Software Engineer specialising in blockchain, AI and backend development, with experience delivering MERN applications, AWS infrastructure, smart-contract platforms and production AI solutions.

EDUCATION

BSc Computer Science and Software Engineering | University of Bedfordshire | 2020 | First Class Honours

Research: FireProtect - Wildfire prevention using IoT

Higher Diploma in Information Technology | SLIIT | 2016-2019

EXPERIENCE

Senior Software Engineer | XigeniX

November 2023 - Present | Sydney / Colombo

Full-stack blockchain and AI development with AWS, CDK, Lambda, Solidity, Ethers.js and Node.js.

- AI Solutions: Built natural-language ordering and RAG systems with OpenAI, Google AI, Ollama, Pinecone, ChromaDB, n8n and REST APIs.
- SKY AI: Architected a multi-tenant Amazon Q Business assistant with AWS CDK, OpenAPI tools, meta-prompting and evaluation workflows.
- MCP Integration: Connected Claude Desktop to internal services, optimising tool execution, context handling and latency.
- MyCarbon Platform: Delivered a full-stack blockchain platform on Arbitrum L2 EVM with custom contracts and Lokblok wallet security.
- Code Quality Initiative: Led company-wide SonarQube adoption for automated code-quality and security analysis.

Software Engineer | Block-Stars Pvt Ltd

June 2021 - November 2023 | Seoul / Remote

Built MERN and Web3 products using Web3.js and Solidity; contributed as Project Lead and supported QA.

- K-Culture, NFT Real Estate and Fauna NFT: Delivered full-stack marketplaces with ERC-721/1155 contracts and OpenSea-compatible minting.
- Token Generator and StarApple: Built ERC-20 tooling and re-engineered MetaMask for Polygon with custom-token support.
- Futures-Trading Platform: Built Ebest middleware for KOSPI/KOSDAQ and a CRON pipeline collecting daily KRX data.
- GREEN P2P: Deployed a Dockerised MERN/Tatum.io custodial wallet for gas-free P2P transactions on Linux.

Freelance Software Engineer | iSotek / Upwork

January 2020 - April 2022 | Remote

Delivered web, mobile, Web3 and machine-learning solutions using MERN, PHP, Python, Go and Java.

- DIG-NFT: Built a non-EVM NFT marketplace on XRPL; MathBuddy: developed a Node.js, Express and MongoDB Atlas mobile backend.
- Cloth Predictor: Built with Python, Pandas, Scikit-learn and FastAPI; Math Game: developed with Java SE, NetBeans and MySQL.

TECHNICAL SKILLS

Backend / Web: JavaScript, TypeScript, Node.js, Express.js, Python, FastAPI, REST, PHP, SQL, Nginx

Blockchain: Solidity, Web3.js, Ethers.js, Smart Contracts, Ethereum, EVM, L2, DeFi, XRPL, Wallet Security

AI: LLMs, RAG, NLP, LangChain, Ollama, OpenAI, Google AI, Amazon Q, MCP, n8n, Meta-Prompting, Model Training, TTS, STT, Guardrails

Cloud / Data: AWS, CDK, Lambda, EC2, S3, Route 53, Docker, CI/CD, MongoDB, DynamoDB, Pinecone, ChromaDB
